

LIBRA LURES®

LIBRA LURES CATALOG 2022/2023

We are a group of enthusiasts, who built the 'Libra Lures' brand on years of experience in lure fishing. We produce artificial lures designed to catch all species of fish feeding on insects and larvae. One of the founding fathers of the brand is Mateusz Okoń - a long-time participant of Polish GPx in spinning discipline and a participant of World Championships. The main designer of our lures is Tomasz Podkul, the current winner of the trout fishing of Poland and presently the best spinning angler in the world in trout fishing from the bank.

Our biggest challenge was to ensure a proper technology and select a product material, which a fish will not pass unnoticed. After intensive trials lasting for months we managed to overcome all the obstacles and obtain a very soft material of high buoyancy and at the same time resistant to sharp teeth of predators.

This catalog presents products created out of passion, love for fishing and communing with nature.

TROUT SERIES

DYING WORM

Dying Worm - it's a lure with endless possibilities! The combination of super elastic and buoyant material gives us the possibility of provoking many species of fish, not only predatory ones. The slightest movement of the water or a gentle twitch of the rod tip makes the Dying Worm start to move and tempt even very cautious and inactive fish.

*hook sizes may vary considerably between different brands.

FISH

brown trout, rainbow trout, perch, chub, ide, grayling and whitefish.

TACKLE

an essential element of a properly composed set will be an adequately performing rod, 185-220cm / 1-6g in length, which will not only properly absorb the fish's runs during the fight but will also have the necessary backbone when you hook the fish and help you properly retrieve the lure and feel the often very gentle bites. For such rods a reel in 2000-3000 size with a precise drag is recommended. Braided line of size +-0.2-0.4PE - 0.06-0.08mm or 0.12-0.16mm diameter monofilament of high quality. With such a set we can easily catch most species of fish. When fishing for larger fish, the set needs to be modified and adjusted to the specific conditions.

FISHERIES

rivers, lakes, ponds, artificial reservoirs water, canals.

SCENT

Cheese - perfect for use in standing waters such as commercial Trout Area ponds and medium-sized rivers when fishing for whitefish.

Krill - recommended mainly for fishing wild fish in large rivers and fishing for predators such as perch, zander in dammed reservoirs, lakes.

Unscented - for those with a sensitive sense of smell.

FATTY D'WORM

Fatty D'Worm - This is a very surprising lure, it appears too big and chunky, and yet fish not much bigger than it can attack it. It can be fished with a lot of weight on it as well as with a little weight on it, and it will always work well. When rigging, remember not to stiffen the body with too long a hook shank. If we choose the right weight, retrieving our lure is easy and pleasant, even in strong current. The lure, thanks to its construction, rarely gets stuck in the snags, you can safely leave it on the bottom, even if the fishery is covered with weeds, you can fish with it both aggressively, by overloading it ... as well as very lightly. It will always work well.

brown trout, rainbow trout, huchen, salmon, sea trout, chub, zander, perch

FISHERIES

rivers, lakes, ponds, artificial reservoirs water, canals.

TACKLE

an essential element of a properly composed set will be an adequately performing rod, 185-220cm / 1-6g in length, which will not only properly absorb the fish's runs during the fight but will also have the necessary backbone when you hook the fish and help you properly retrieve the lure and feel the often very gentle bites. For such rods a reel in 2000-3000 size with a precise drag is recommended. Braided line of size +-0.2-0.4PE - 0.06-0.08mm or 0.12-0.16mm diameter monofilament of high quality. With such a set we can easily catch most species of fish. When fishing for larger fish, the set needs to be modified and adjusted to the specific conditions.

SCENT

Cheese - perfect for use in standing waters such as commercial Trout Area ponds and medium-sized rivers when fishing for whitefish.

Krill - recommended mainly for fishing wild fish in large rivers and fishing for predators such as perch, zander in dammed reservoirs, lakes.

Unscented - for those with a sensitive sense of smell.

FATTY D'WORM TOURNAMENT

NEW

Fatty D'Worm Tournament - at the request of many anglers, including trout competitors from all over Europe, a new model - 55mm - has been added to the Fatty family. It has been trimmed down and shortened to avoid "empty" bites of smaller fish. We can rig it with a classic #4-6 size fly hook and catch 25 cm fish efficiently and effortlessly. The Fatty D'Worm Tournament is the easiest lure to use by far from our brand. If you are starting your trout fishing adventure, start with the Fatty D'Worm Tournament 55 mm.

Unscented - for those with a sensitive sense of smell.

FLEX WORM

NEW

Flex Worm - is the number one lure when it comes to catching sluggish and uncooperative fish. It has been designed to make fishing simple, fun and effective! Thanks to its curved tail, the lure works with the slightest movement of the rod tip. It straightens and curls provoking the fish to attack. No fish will pass indifferently by such a naturally working earthworm. Its innovative shape makes it a versatile lure and very easy to use.

FISHERIES

rivers, lakes, ponds, artificial reservoirs water, canals.

SCENT

Cheese - perfect for use in standing waters such as commercial Trout Area ponds and medium-sized rivers when fishing for whitefish.

Krill - recommended mainly for fishing wild fish in large rivers and fishing for predators such as perch, zander in dammed reservoirs, lakes.

Unscented - for those with a sensitive sense of smell.

LARVA

Larva - it is our most universal lure. It works exceptionally well in rivers, ponds and lakes, provoking everything that moves underwater to attack. Finely rigged, it looks very natural and we can easily outsmart both wary trout and timid chub. Larva should be cast over a potential fish's spot and let it flow freely. The less corrections to the line on the way down the better. When rigging, make sure not to overload it. Run it close to the bottom so that it floats just above it. On a tense line we move it just above the bottom and from time to time we try to give it a bit of life by a gentle twitch of the rod tip.

Krill - recommended mainly for fishing wild fish in large rivers and fishing for predators such as perch, zander in dammed reservoirs, lakes.

Unscented - for those with a sensitive sense of smell.

LARVA MULTI

NEW

Larva Multi - an extremely versatile and reliable lure in the form of five connected 25mm Larvas. This solution allows us to fish with one, two or more worms, depending on the needs. The single 25mm Larva will work great for whitefish in both standing waters and rivers, while the double ones will be most effective when fishing for brown trout. We use Larva's triple rigging to achieve greater buoyancy of the lure and visibility underwater.

- **Larva Multi 5x25** - straight hook with large eye in size #8 - 12, cheburashka weight 1 - 5g.

JIG RIG - STRAIGHT HOOK / CLASSIC

- **Larva Multi 5x25** - straight hook with large eye in size #8 - 12, weight 1 - 6g.

**hook sizes may vary considerably between different brands.*

FISH

brown trout, rainbow trout, barbel, chub, ide, grayling and whitefish.

TACKLE

an essential element of a properly composed set will be an adequately performing rod, 185-220cm / 1-6g in length, which will not only properly absorb the fish's runs during the fight but will also have the necessary backbone when you hook the fish and help you properly retrieve the lure and feel the often very gentle bites. For such rods a reel in 2000-3000 size with a precise drag is recommended. Braided line of size +-0.2-0.5PE – 0,04-0,08 mm or 0,10-0,16 mm diameter monofilament of high quality. With such a set we can easily catch most species of fish. When fishing for larger fish, the set needs to be modified and adjusted to the specific conditions.

FISHERIES

rivers, lakes, ponds, artificial reservoirs water, canals.

SCENT

Cheese - perfect for use in standing waters such as commercial Trout Area ponds and medium-sized rivers when fishing for whitefish.

Krill - recommended mainly for fishing wild fish in large rivers and fishing for predators such as perch, zander in dammed reservoirs, lakes.

Unscented - for those with a sensitive sense of smell.

LARGO

Largo - a perfect imitation of an insect pupa, which is the basic food of many species of fish. The basic weapon during fishing for rainbow trout in Trout Area type fisheries and during winter and early spring chub fishing. The lure is available in two sizes, 30mm and 35mm, in order to be able to choose the right size for feeding fish.

Krill - recommended mainly for fishing wild fish in large rivers and fishing for predators such as perch, zander in dammed reservoirs, lakes.

Unscented - for those with a sensitive sense of smell.

KUKOLKA

Kukolka - is an essential tool when fishing for rainbow trout. Its greatest asset is its shape, which makes the lure work well in almost all techniques while retrieving it. From natural, fine presentation to aggressive twitching. When designing Kukolka, we put a lot of care into the construction of the ring segments and their clarity, so that it stands out from its surroundings in the water and quickly catches the eye of the fish. This is especially important on commercial waters and those with low transparency. A perfect lure for fast fishing of rainbow trout, chub and brown trout during water rising.

Krill - recommended mainly for fishing wild fish in large rivers and fishing for predators such as perch, zander in dammed reservoirs, lakes.

Unscented - for those with a sensitive sense of smell.

LARGO SLIM

Largo Slim - this is a smaller and slimmer version of Largo. This small larva has the potential to provoke cautious fish and is extremely effective in fisheries with high fishing pressure, where often the key to success is to give a small lure when the fish are feeding on tiny insects (a common situation during summer lows in rivers). Rigged with a small tungsten bead on a fly jig hook on a finesse set, it will help to tempt even the most finicky fish. It is dedicated as a lure for small rivers and streams.

Krill - recommended mainly for fishing wild fish in large rivers and fishing for predators such as perch, zander in dammed reservoirs, lakes.

Unscented - for those with a sensitive sense of smell.

PRO NYMPH

PRO Nymph - the key thing when fishing with nymphs is to match the weight of the jig head to the fishery and the activity of the fish. We use the nymph for short and very smooth twitches in order to give it some life and make its movement look like a natural prey. This is quite easy as the tail is very soft and the thicker tips make it twitch quickly. With a nymph we usually fish places near the very bottom. Usually they are lifted about 5-10 cm above the bottom and then they fall freely. When fishing in the river we try to choose the speed of retrieve so that it is not faster than the flow of the river. The path of the nymph has to be such that it passes as close as possible to the obstacle i.e. stone, branch, clump of weed, that is a potential hideout for predators. In the crucial moment of the retrieve the nymph **MUST** fall just before the obstacle.

Krill - recommended mainly for fishing wild fish in large rivers and fishing for predators such as perch, zander in dammed reservoirs, lakes.

Unscented - for those with a sensitive sense of smell.

TURBO WORM

NEW

Turbo Worm - due to many requests from Trout Area anglers and competitors not only from Poland, we designed the Turbo model. Because of our special, strongly floating material used for Trout Series, we created a brindle "killer". Its main target are rainbow trout and perch. It will also perform excellently when fishing for silver fish. The Turbo Worm's body is equipped with additional legs, which are not only attractive for fish, but also act as an anti-snag. This is extremely important when fishing in places where leaves gather and it is difficult to get the lure under the surface of the water - every cast ends with a leaf at the end of the rig, which makes speed fishing very difficult.

BASS SERIES

BASS FAT BOY WACKY WORM

NEW

Bass Fat Boy Wacky Worm 128mm / 5" - as the name suggests, this lure has been designed for the most popular rigging system in bass fishing, the Wacky Rig. Its unusual shape, which attracts the attention of fish even more than standard lures, and a specially designed slot for the rubber band will allow us to present the lure with finesse and effectively catch even the most cautious fish and effectively catch even very cautious and inactive fish. The material used for the BASS series lures has been made stronger, which ensures greater durability of the lure and a lifelike action of the lure underwater. Not only bass are fished with this type of lure, it is a very effective lure in the drop shot method when fishing for zander.

MODEL	SIZE / LENGTH (mm)	PACKAGING / JAR (pcs)	SCENT / TASTE
BASS FAT BOY WACKY WORM	128	8	KRILL

The BASS range of baits is based on a new blend called "Salt Worm Project". It has been designed with a salt base that contributes to the appetising and aroma of the krill.

The material is very soft and strong, providing a lifelike action to the lure, created for finesse presentations to fool the most difficult to catch fish.

- Bass Fat Boy Wacky Worm 128 - straight / offset hook with large eye size #3/0.

SIDE STRAP

- Bass Fat Boy Wacky Worm 128 - straight / offset hook with large eye size #2/0.

*hook sizes may vary considerably between different brands.

FISH: bass, zander, perch, huchen, sea trout, salmon, brown trout, rainbow trout.

TACKLE: we choose depending of the technique we want to present the lure with and the species of fish we want to catch. The basic tackle recommended when fishing for bass is a casting or spinning rod 210-240 cm long with a casting weight of up to 21-35 g, which will bent properly but will also be fast enough. A delicate, subtle tip with which we can finesse fish will help us to present the lure effectively and naturally underwater and provoke wary bass to attack. When fishing with soft lures and the contact of the lure with the bottom, we use reels or multipliers with a large gear ratio. This allows us to quickly reduce excess line and not miss delicate bites when presenting and guiding the line. Another important element is the main line. It is recommended to use fluorocarbon with a maximum strength of 9 kg for soft lures because of its parameters. It has much higher abrasion resistance and does not absorb water like monofilament. Another advantage is its low stretch and optical density, which makes it much harder to see under water.

FISHERIES: rivers, lakes, ponds, artificial reservoirs water, canals.

SCENT:

Krill - recommended mainly for fishing wild fish in large rivers and fishing for predators such as perch, zander in dammed reservoirs, lakes.

TASTE:

a mix designed with a salt base that enhances appetisation.

BASS FAT STICK WORM

NEW

BASS FAT STICK WORM 128 mm / 5" - a lure that allows you to catch virtually any species of predatory fish as well as large silver fish. Primarily oriented towards bass fishing, but no fish will pass it by indifferently! It is perfect in the pursuit of record-breaking trout - as the bigger and thicker brother of the Dying Worm, it is also suitable for the sbirulino method in sea trout fishing.

MODEL	SIZE / LENGTH (mm)	PACKAGING / JAR (pcs)	SCENT / TASTE
BASS FAT STICK WORM	128	8	KRILL

The BASS range of baits is based on a new blend called "Salt Worm Project". It has been designed with a salt base that contributes to the appetising and aroma of the krill.

The material is very soft and strong, providing a lifelike action to the lure, created for finesse presentations to fool the most difficult to catch fish.

BASS SLIM FINNESE WORM

NEW

BASS SLIM FINNESE WORM 140 mm / 5,5" - there may not be an ideal worm but the Slim Finesse is damn close! Slightly longer and a bit skinnier in diameter than the Stick Worm, created mainly for the drop shot technique, it allows for perfect animation of the lure during its retrieve - presentation. The slightest twitch of the rod tip sets in motion not only its flat tail but also the entire body. It does not deviate much from a natural worm that has dropped into the water.

MODEL	SIZE / LENGTH (mm)	PACKAGING / JAR (pcs)	SCENT / TASTE

BASS CRAZY TWIST TAIL WORM

NEW

BASS CRAZY TWIST TAIL WORM 140 mm / 5,5" - an excellent lure for the carolina rig and texas rig method, as well as for the classic jig head. Its shape and action allow effective fishing for bass, zander and pike in technically difficult fisheries among branches, weeds and bushes. Properly rigged and presented in the right place, it can often turn out to be the lure of last resort! Wide variety of colours allows to suit the species of predator and the conditions on the water.
